Claim 5; Page 32-35; 63pp; English.

Incorporation of genes encoding two enzymes makes the host organisms able to produce (3:HP) from (1). The biotechnological method of from preparing (3:HP) is potentially cheaper than chemical synthesis. The present sequence represents the human aldehyde dehydrogenase ALDH2, which recombinant microorganism in the presence of a source of glycero. (1) or glucose, where the microorganism: (1) expresses genes for non-native enzymes which catalyse the production of (3 HP) from (1); (ii) carries genetic constructions for the expression of a dycerol dehydratase (GDHT) and aldehyde dehydrogenase (ADH) capable of catalysing the production of (3 HP) from (1); or (iii) carries a genetic construct which expresses the dhab gene from Klebsiella pneumoniae and a gene for an ADH capable of catalysing the production of (3 HP) from (1); 3 HP is a monomer, and is useful e.g. in the production of absorbable prosthetic devices and surgical sutures or for incorporation into beta-lactams, production of arrival actions. The present invention describes a method for the production of 3-hydroxypropionic acid (3-HP). The method comprises fermenting a or diols, polyhydroxyalkonates and copolymers with lactic acid. is used in the exemplification of the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This invention describes a novel isolated genes and haplotypes of the human aldehyde dehydrogenase 5 (ALDHS) gene containing polymorphic sites. The polymorphic ALDHS variant is useful in studying the effect of the variation on the biological activity of ALDHS and on the binding affinity of candidate drugs targeting ALDHS for the treatment of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        2.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New genetic variants with polymorphisms in the aldehyde dehydrogenuse 5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              alcoholism and alcohol-induced disorders. Polynucleotides comprising a polymorphic gene variant or tragment may be used for therapeutic purposes. ALMHS protein isoforms may be used in assays to measure the binding affinities of one or more candidate drugs targeting the ALMHS protein. ALMHS proteins may be used to generate antibodies. Haplotyping method can be used by scientists to validate ALMHS as a candidate.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             target for freating a specific condition or disease predicted to be associated with ALMS activity, and in the design of clinical trials of candidate drugs for treating a specific condition or disease predicted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ALDHS as well as in identifying drugs targeting this protein for the treatment of disorders related to its abnormal expression or function.

                                                                                                                                                                                                                                                                                                                                                                   protein. ALMF proteins may be used to generate and produce and protein and the proteins may be used by scientists to validate ALDH5 as a candidate target for treating a specific condition or disease predicted to be associated with ALDH5 activity, and in the design of clinical trials of candidate drugs for treating a specific condition or disease predicted to be easterned with ALDH5 activity. Information or polymorphisms on the ALDH5 as well as in identifying drugs targeting this protein for the treatment of disorders related to its abnormal expression or function or the products of the invention have antial oblicity artists sequence. The products of the invention have antial oblicity ratis sequence.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     disorders such as neural, immune, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal, and proliferative disorders. The proteins may also be used in the treatment of wounds and infectious diseases. Polynucleotide sequences AAFIB425 AAFIB43 and peptide ABSB549 are used in the course of the invention for the identification and characterisation of the polynucleotide and protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 antiques, useful for treatment, prevention, and diagnosis of disorders such as lung cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    associated proteins represented in AABSB106 AABSB548. Lung cancer associated proteins and polynucleotide sequences, their agonists, and antagonists may have neuroprotective, cytoshatic, cardioactive; and immunomodulatory; muscular active general; vulnerary; quarrointestinal general, nephrotropic, antitiatective; quecological; or antibacterial activity. The invention also includes anothedies specific for the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Polynacicotide sequences AAP17982 - AAF18424 encode Janian Jung cameer

dehydrogenase and/or human distangleysteine synthetase (AAP6/8673). Hematogenetic cells transfected by the vector are resistant to synthematic periodical and a means of gree thouse; that allows higher doses of toxic drugs to be used in cancer chemotherapy. The human genes may also be used as selectable markers for mammalian cell transfection and for transgenic animal breeding.

The method comprises contacting a biological sample from the patient with prostate cancer-associated polynucleotides (designated PC genes) that selectively hybridise to a sequence that is at least 80% identical
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    modulators of PC, by determining if prostate cancer-associated genes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                prostate cancer. The nucleic acid sequences are particularly useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 useful for diagnosing or treating prostate cancer, as well as for identifying modulators of prostate cancer or agents that inhibit
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   to them. The prostate cancer-associated polynucleotide sequences are differentially expressed in prostate tumour tissue or in prostate cancer and are derived from the tissues of various
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Detecting a prostate earest-associated transcript in a cell in a patient, useful for diagnosing prostate cancer (PC) or screening
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to methods of detecting a prostate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         in gene therapy, as a vaccine or in antisense applications.
ABG61800-ABG61944 represent prostate cancer-associated proteins.

endometrics is by determining the amount of gene product from at least one specific gene in a patient sample and comparing with the amount of gene product in a centrol sample and comparing this with the amount of gene product in a centrol sample and comparing this with the amount of gene product in a centrol sample. A reduced level is individually to a another sample and dehydrogenase 6, gravin, phospholipase C epsilon, elastin, insulin-like growth factor binding practice. In place 2 type IV collader, transmembrane receptor binding practice. In place 2 type IV collader, subtilisin like protein PRMY or indogen type XVIII alpha 1, so that it is subtilisin. It diagnosis of endometricsis, and also the mention for the treatment of the disease. The present sequence is human abledayde.

Claim 20; SEQ ID NO 36446; InApp; English

```
The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, belymerase chain reaction (PCE) primers. Oligomers, and for chromosome and green magning, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving devirant promein expression or biological activity the polypeptide and polynucleotide sequences have applications in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            307

                                                                                                                                                                                                                                                                                                           diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amano acid sequences. ABOHUHH-ARMARTZ represent novel human diagnostic amino acid sequences of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                            Noté. The separate data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      96 QVAFQPGSPWPPLDALSPGPLLHQLADLVEPDPATLAALETMOTGKPFLHAFFIDLEGCI

Novel acctyl CoA synthetaso (ACS), plastidic pyruvate dehydrogenase (PDDH), ATP citrate lyase (ACL), pyruvate decarboxylase (PDC) and aldehyde dehydrogenase (ALDH) polypeptides used to alter acetyl CoA levels in plants

Examples; Fig 10B; 79pp; English.

biosynthesis of very long chain fatty acids and flavonoids. The enzymes may also be used for in vitro synthesis of acetyl CoA, which in turn can be used to produce acetyl CoA phytochemicals (plastidic ACS, ppbH, ACL, pyruvate decarboxylase, acetyl CoA pydrolase, mitochondrial pyruvate dehydrogenase and aldehyde dehydrogenase are involved in the biosynthesis The invention provides nucleic acids encoding Arabidopsis plastidic acetyl CoA synthetase (ACS), various subunits (specifically the E3 subunit) of plant plastidic pyruvate dehydrogenase (pPDH), the A and B subunits of a plant ATP citrate lyase (ACL), Arabidopsis pyruvate decarboxylase (PDC), Arabidopsis aldehyde dehydrogenase (ALDH), specifically ALDH-2 and ALDH 4. The polypeptides can be expressed by standard recombinant methodology. The ACS, pPDH, ACL, POC and ALDH polypeptides, methods and nucleic acid molecules of the invention are used to alter the level of acetyl COA in a plant or plant cell, tissues or or organs. A decrease in acetyl COA is expected to affect the

The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genemic DNA sequences (ABLIG175-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    311

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        allergens and sequences encoding them have now been isolated. The mature Clah53 allergen has mol. wt. 53 kD and is encoded by cDNA sequence AAQ86278. The allergen has been dony to aldebyde dehydrogenases. Potential epitopic subfragments were identified by computer analysis of the amino acid sequence. See AAR71492.871996 for potential B cell epitopes and AAR72615.8726.27 for patential I cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Albergens derived from Cladosporium herbarum spores—also recombinant DNA for expressing the albergens, useful for in vitro
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Spores of Cladosporium herbarum are the most common funtal spores found in the air; they can cause allorqic reactions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 associated with the alcohol dehydrogenase I (alcA) gene and the aldehyde dehydrogenase (aldA) gene of A. nidulans or naturally associated with the glucoanylase gene in Aspergillus niger may be used. The DNA construct may contain a promoter region in operative association with a signal peptide coding region. The promoter/signal construct is suitably provided with a flanking restriction site to allow precise coupling of the protein coding region to the signal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     3; Gaps
